

Instructions to Generate an App-specific Password for iCloud

App-specific passwords allow you to sign in to your account securely when you use third-party apps with your Apple ID. App-specific passwords maintain a high level of security and help ensure your Apple ID password won't be collected or stored by any third-party apps you use. To generate and use app-specific passwords, your Apple ID must be protected with two-factor authentication.

1. Sign in to your **Apple ID account page**.
2. In the Security section, click **Generate Password** below App-Specific Passwords.

3. Follow the **steps** on your screen.
4. After you generate your app-specific password, copy and **paste** it into the password field.

Note:

- If you revoke the app-specific password, you will be signed out of your calendar account in Chronus. You will need to generate a new password and sign in again to connect your calendar.
- Any time you change or reset your primary Apple ID password, all your app-specific passwords are revoked automatically to protect the security of your account. You will need to generate new app-specific passwords for any apps that you want to continue using.
